Quality and delivery dossier

Documents agreed by project milestone

Before order	Technical specification, supply scope, proposed inspection plan, design-series evidence and deviations.
Before manufacturing	Approved TDS, single-line diagram, general arrangement and interface drawings, closed clarifications and agreed document register.
During production	Inspection records, material and component traceability, agreed hold/witness points and non-conformity records.
Before shipment	Serial-number routine test report, agreed FAT record, closed punch list, nameplate, packaging check and shipping dimensions/masses.
Delivery	Transport documents, agreed conformity documents, manuals, accessory list and delivery receipt.
After-sales	Project reference, serial number, incident description, nameplate, photos and available test/operating records.

Test report structure

Identification and serial number; applicable procedure and instruments; specified limits, measured results and conclusions; inspector validation; corrective actions and release decision. Routine, type and special tests are distinguished in the project inspection plan.

Project-specific evidence

Factory qualifications, relevant accreditations and design-series test evidence are reviewed for the selected equipment. This list defines the dossier structure; the issued reports contain the real values and records for the supplied unit.
